

# easy care → Health care simplified

Looking after your loved ones can sometimes be very difficult as you cannot always be there for them when they need it. Likewise, those of us who need the **confidence boost** of having carers on-hand can feel guilty about the demands on our families.

**Easycare** helps to keep you safe if anything goes wrong and reduces worry for carers. We all feel guilty and worried in these busy times about our elderly or disabled relatives. If you can't always be there, this is the next best thing.

If needed the user may press the button on the small pendant and the main unit automatically dials **any standard telephone** for help. If the first number is busy or on voice mail it will dial the next pre-programmed number in sequence until answered. When the call is answered an emergency message is played and then hands-free two-way conversation commences. This comprehensive solution simply requires a telephone line to operate and removes the need for expensive annual contract monitoring fees.
