

Intruder Alarm Systems – Residential Hard Wired

In order to deter intruders and anti-social behaviour at our homes we must firstly study the street view of the property and work to make it a less appealing and more difficult a target. Practical measures to achieve this aim include opening up outside spaces to remove hidden areas, physical items such as locks / doors / windows, security lighting, alarm systems and CCTV. The Visual Deterrent Factor of these measures is important and is particularly affected by the professional appearance of any measures taken

ITS intruder alarm systems are built from a range of carefully selected products to provide a building wide detection system. The hardwired range includes many different products to cover all types of environment and to ensure long term reliability.

Installing a hard-wired system requires some degree of skill to hide the cabling required to physically connect the devices together but gives a good long-term solution with minimal maintenance requirements. Our experience with this type of installation in both domestic & commercial applications will ensure a trouble free installation leaving very little visible sign of the work involved. We have to make a certain amount of mess but we are completely used to clearing up behind us as we work to **leave your home in a clean and tidy state.**
